

CANTILEVER POST PEDESTAL INSTALLATION

For sign materials which are 1/2" and thicker and do not require the support or protection of our sign frames, we manufacture several types of pedestals. All of the pedestals are made from aluminum extrusions, are available as surface mount or in-ground mount, and in durable powder coat finish. All mounts have four holes which match up to the inserts in the back side of the 1/2" laminate. Templates of the hole alignment can be furnished to assure your sign and pedestal will match. Mounting angles of 30 and 45 degrees are available. Steel pedestals are also available and are custom items.

The Cantilever Pedestal is similar in appearance to the NPS Cantilever Exhibit Base. Your sign attaches to the angles which are welded to the posts and is displayed between the posts. This pedestal is used with frames which are 18" to 24" high. Sign widths can vary. Mounting height from ground level to the bottom edge of the frame is 28" to 32" .

Please refer to your sign manufacturer for installation specifications.
